Carl Carleberg Manager

Reo-Maker

Ideal for:

- Industrial complexes
- Port facilities , quays , loading ramps etc
- Dam walls
- Airports , runways
- Reinforced concrete bases for Fast Trains
- Civil Engineering projects in general
- Freeways in reinforced concrete CRCP

When the Excavator arrived in the 1920's it heralded a new era in earth moving and foundation work.

Now some 80 years later **Reo-Maker** has arrived. Its impact in regard to reinforcement placing will be similar.

INTERNATIONAL

The Glim Gun
suspended from a frame.

High quality ties
at a very fast rate

Reo-Maker

For all types of heavy reinforcement

Features:

Mechanical
method. •

The reinforcement steel is assembled on a mobile
platform •

- drawn by a "locomotive" selected to suit.

Reo-Maker moves on any compacted sub-base i.e. sand, blue •
metal or concrete without making any indentations.

- Transported - from one site to another - in a standard container.
- Easy and fast to assemble and dismantle. (No specialised skill required)
- Can be used on all widths up to 9 metres. Easy to adjust.

Benefits:

- Reduced costs
- Huge reduction in labour force - lower overheads
- Time required to complete is more than halved
- With **Reo-Maker** the reinforcement work is normally taken off the "critical path"
- High quality finish, improved accuracy in spacing and alignment

Reo-Maker makes reinforcement easier!
